September 19th from 1-5.**

According to the AAA, an unrestrained 10-pound dog in a crash at only 30 mph will exert roughly 300 pounds of pressure, while an unrestrained 80-pound dog in a crash at only 30 mph will exert approximately 2,400 pounds of pressure. Unfortunately there are no crash-test protocols or performance standards for animal restraints as there are for child seats in the U.S.. Subaru teamed up with the Center for Pet Safety to determine the effectiveness of seat belt restraints. The full performance report can be found at CenterforPetSafety.org
